

Junior Equities Rise Steadily Amid Bitcoin Mania

- Precious metals continued their positive run in 2018**, led by gold which passed the \$1,300 level last week and has now gained almost 3% since the beginning of the year. Today, the yellow metal finished at US\$1,339 per ounce, while platinum (up 2.6%) and palladium (up 2.8%) also finished higher for the week; silver remained relatively flat at US\$17.26 per ounce. With cryptocurrencies continuing to be the investment of choice for high-risk capital, despite the >20% drop in bitcoin on Thursday following fears of a South Korean crackdown, junior exploration equities have taken a back seat but still managed to perform positively. The VanEck Vectors Junior Gold Miners ETF has risen 15% since mid December while the S&P/TSX Venture Index has risen 14% during the same period, with the latter reaching a high of 939 on Tuesday. The S&P/TSX Global Gold Index has risen five points (to 200) since the beginning of the year.
- Base metals were mostly up week over week**, LME zinc and nickel were the most positively impacted metals, both up 1.6% WoW, followed by copper which was flat WoW. Year over year, copper, zinc and nickel are up 21.7%, 26.8% and 24.1%, respectively. LME inventories for copper, zinc and nickel were flat WoW at +0.1%, -0.1% and +0.3%, respectively. Excluding bonded warehouse inventories, we calculate the current days of consumption at 8.8 for copper and 6.6 for zinc. Copper rallied over the past two days, regaining losses from earlier in the week, following bullish analyst remarks. Analysts expect further supply disruptions and an improvement in demand in 2018, backed by a recovery in global manufacturing. Zinc hit a decade high on the LME earlier in the week, trading above \$3,400/ton, the highest level since August 2007. The price increase was driven by concerns over a possible price squeeze as inventory levels continue to decline. Driven by the increase in LME metals prices, the base metals equities were up this week with the exception of Imperial Metals and Sherritt International, down 11.6% and 10.1% WoW, respectively, following the release of 2017 production results and 2018 guidance. Teck, Lundin and Hudbay were the top performers WoW, up 12.6%, 4.5% and 3.6% WoW, respectively.

Rating Structure

Each company within an analyst's universe, or group of companies covered, is assigned: (i) a recommendation or rating, usually BUY, HOLD, or SELL; (ii) a 12 month target price, which represents an analyst's current assessment of a company's potential stock price over the next year; (iii) an overall risk rating which represents an analyst's assessment of the company's overall investment risk; and (iv) specific risk ratings or risk profile parameters which in their aggregate support an analyst's overall risk rating. These ratings are more fully explained below. Before acting on our recommendation we caution you to confer with your Haywood investment advisor to determine the suitability of our recommendation for your specific investment objectives, risk tolerance and investment time horizon.

Recommendation Rating

BUY – The analyst believes that the security will outperform other companies in their sector on a risk adjusted basis or for the reasons stated in the research report the analyst believes that the security is deserving of a (continued) BUY rating.

HOLD – The analyst believes that the security is expected to perform in line with other companies in their sector on a risk adjusted basis or for the reasons stated in the research report the analyst believes that the security is deserving of a (continued) HOLD rating.

SELL – Investors are advised to sell the security or hold alternative securities within the sector. Stocks in this category are expected to under-perform other companies on a risk adjusted basis or for the reasons stated in the research report the analyst believes that the security is deserving of a (continued) SELL rating.

TENDER – The analyst is recommending that investors tender to a specific offering for the company's stock.

RESEARCH COMMENT – An analyst comment about an issuer event that does not include a rating or recommendation.

UNDER REVIEW – Placing a stock Under Review does not revise the current rating or recommendation of the analyst. A stock will be placed Under Review when the relevant company has a significant material event with further information pending or to be announced. An analyst will place a stock Under Review while he/she awaits sufficient information to re-evaluate the company's financial situation.

COVERAGE DROPPED – Haywood Securities will no longer cover the issuer. Haywood will provide notice to clients whenever coverage of an issuer is discontinued.

Haywood's focus is to search for undervalued companies which analysts believe may achieve attractive risk-adjusted returns. This research coverage on potentially undervalued companies may result in an outweighed percentage of companies rated as BUY. Management regularly reviews rating and targets in all sectors to ensure fairness and accuracy.

Overall Risk Rating

Very High Risk: Venture type companies or more established micro, small, mid or large cap companies whose risk profile parameters and/or lack of liquidity warrant such a designation. These companies are only appropriate for investors who have a very high tolerance for risk and volatility and who are capable of incurring temporary or permanent loss of a very significant portion of their investment capital.

High Risk: Typically micro or small cap companies which have an above average investment risk relative to more established or mid to large cap companies. These companies will generally not form part of the broad senior stock market indices and often will have less liquidity than more established mid and large cap companies. These companies are only appropriate for investors who have a high tolerance for risk and volatility and who are capable of incurring a temporary or permanent loss of a significant loss of their investment capital.

Medium-High Risk: Typically mid to large cap companies that have a medium to high investment risk. These companies will often form part of the broader senior stock market indices or sector specific indices. These companies are only appropriate for investors who have a medium to high tolerance for risk and volatility and who are prepared to accept general stock market risk including the risk of a temporary or permanent loss of some of their investment capital.

Moderate Risk: Large to very large cap companies with established earnings who have a track record of lower volatility when compared against the broad senior stock market indices. These companies are only appropriate for investors who have a

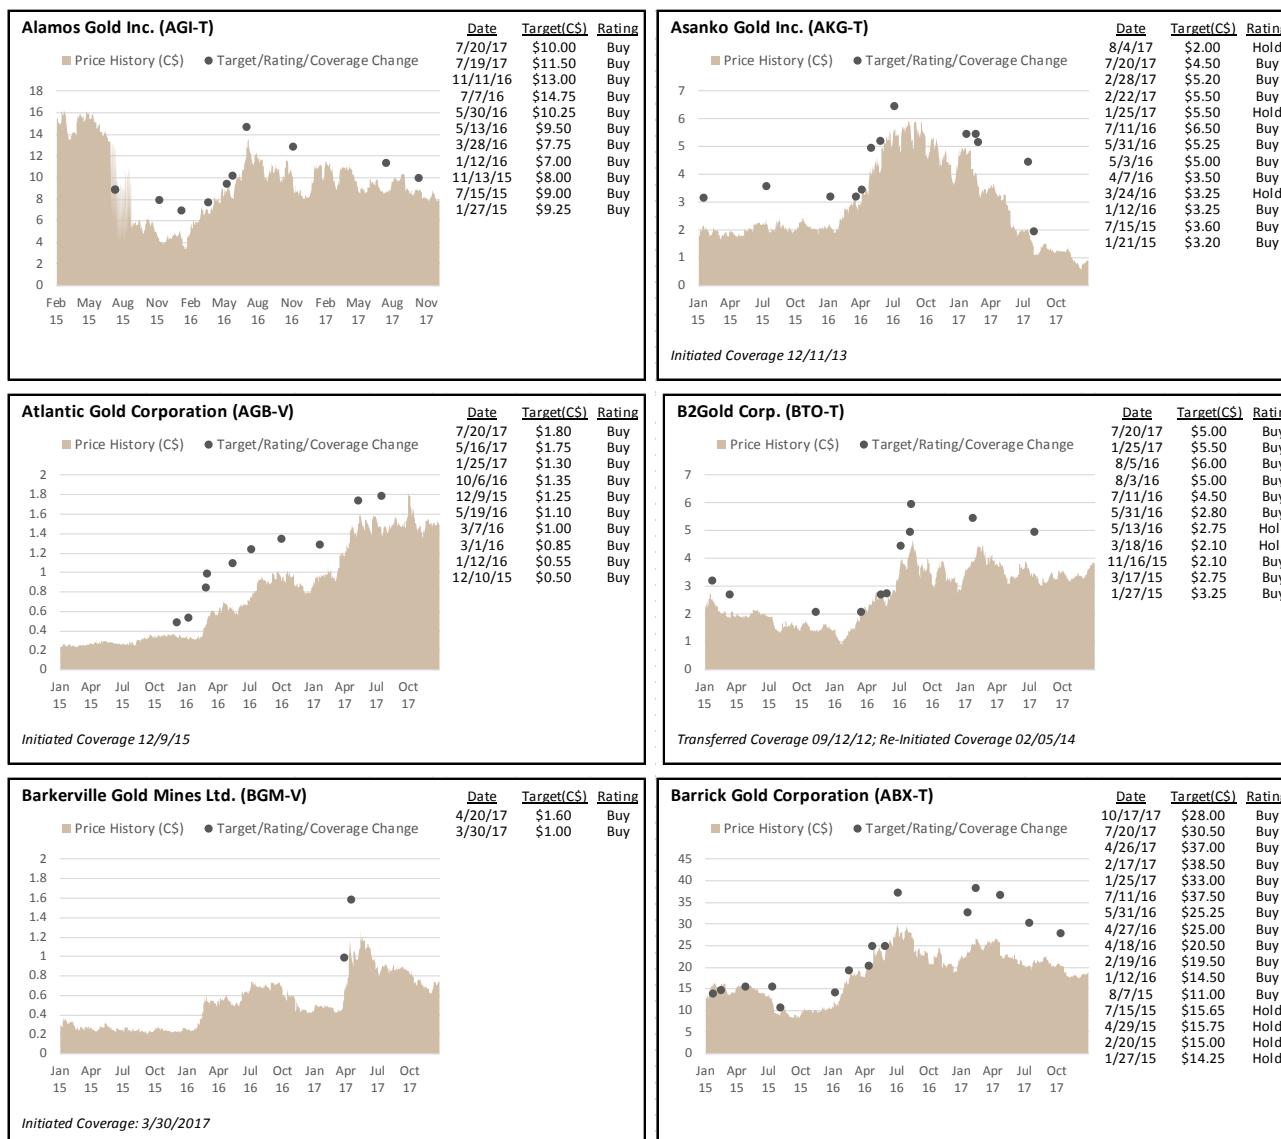

medium tolerance for risk and volatility and who are prepared to accept general stock market risk including the risk of a temporary or permanent loss of some of their investment capital.
